Product Requirements Document (PRD)

Project: Bloom

Product: AI-Powered Career Learning Environment

Version: 1.0

Status: Product Definition

1. Purpose

Bloom helps learners build a personalized learning environment by intelligently discovering, organizing, and recommending educational resources based on their career goals.

Rather than creating educational content, Bloom acts as an intelligence layer over existing learning platforms and continuously guides learners toward the next best learning experience.

2. Product Vision

A learner should never wonder:

- What should I learn next?
- Which resource is the best?
- Am I learning in the correct order?
- Am I wasting time?

Bloom answers these questions automatically.

3. Target Users

Primary Users

Students

- Undergraduate students

- Graduate students
- Self learners

Career Switchers

People transitioning into new careers such as:

- Data Analytics
- Software Engineering
- AI
- Cybersecurity
- Product Management
- UI/UX

Working Professionals

Professionals seeking:

- Upskilling
 - Career transitions
 - Interview preparation
 - Continuous learning
-

Secondary Users

- Universities
 - Bootcamps
 - Corporate Learning Teams
 - Career Coaches
-

4. User Problems

Current learners experience several challenges.

Discovery Problem

There is an abundance of educational content but no clear guidance on where to begin.

Fragmented Learning

Learning occurs across many disconnected platforms.

Examples:

- YouTube
- GitHub
- Blogs
- Documentation
- Courses

There is no unified learning journey.

Lack of Personalization

Most recommendation systems optimize engagement rather than educational value.

Information Overload

Learners spend excessive time searching instead of learning.

No Learning Context

Resources explain individual topics but rarely explain:

- why this topic matters
 - when it should be learned
 - what depends on it
-

Distractions

Educational sessions are frequently interrupted by unrelated recommendations.

5. Product Goals

Bloom should enable learners to:

- define a career destination
- understand their current position
- discover the next best learning resource
- learn in logical progression
- minimize distractions

- track long-term growth
-

6. Success Criteria

The product succeeds when users:

- return consistently
 - complete learning paths
 - reduce search time
 - increase focused learning time
 - discover better educational resources
 - achieve career milestones faster
-

7. Core Features

Feature 1 — AI Onboarding

Objective

Understand the learner before making recommendations.

Inputs

- Career goal
- Current skills
- Preferred language
- Daily learning time
- Learning style
- Experience level
- Interests

Output

A Learning Intent Profile (LIP).

Feature 2 — Personalized Learning Feed

Instead of generic recommendations, Bloom generates a personalized learning feed.

Each recommendation includes:

- Resource
 - Topic
 - Difficulty
 - Estimated duration
 - Why it is recommended
 - What it unlocks next
-

Feature 3 — Learning Roadmap

Every learner receives a dynamic roadmap.

The roadmap contains:

- completed skills
- current skills
- future skills
- optional branches
- milestone checkpoints

The roadmap evolves continuously.

Feature 4 — Learning Sessions

Bloom groups recommendations into focused learning sessions.

Example:

Today's Session

- Watch introductory concept
- Read official documentation
- Build a small project
- Review previous topic

The objective is to create meaningful learning experiences instead of isolated recommendations.

Feature 5 — Guard Mode

Guard Mode minimizes distractions during learning.

Possible actions include:

- hiding unrelated recommendations
- reducing distracting interface elements
- surfacing relevant alternatives
- encouraging focused learning sessions

Users always retain control over Guard Mode.

Feature 6 — Progress Tracking

Bloom tracks:

- completed topics
- learning streak
- projects completed
- skill progression
- estimated readiness

Progress is visualized through an evolving skill map.

Feature 7 — AI Learning Assistant

Learners can ask questions such as:

- Why am I learning this?
- What comes next?
- Explain differently.
- Give me a project.
- Test my understanding.
- Recommend another explanation.

The assistant uses the learner's context when responding.

9. User Journey

Step 1

User installs Bloom.

Step 2

Bloom conducts an AI onboarding conversation.

Step 3

Bloom generates a personalized learning roadmap.

Step 4

Learner begins the first learning session.

Step 5

Bloom observes learning behavior.

Step 6

Recommendations improve continuously.

Step 7

The learner progresses toward career goals.

10. Supported Learning Sources

Initial release:

- YouTube

Future releases:

- GitHub
 - Kaggle
 - Documentation
 - Blogs
 - Podcasts
 - Research Papers
 - Online Courses
-

11. Recommendation Principles

Every recommendation should satisfy four conditions.

Relevant

Matches the learner's career goal.

Timely

Appropriate for the learner's current skill level.

High Quality

Selected using multiple quality signals.

Actionable

Moves the learner closer to completing the current milestone.

12. Non-Functional Requirements

The product should be:

- fast
- responsive
- scalable
- privacy-conscious
- platform-independent
- extensible
- explainable

Users should understand why recommendations are made.

13. Product Metrics

Engagement

- Daily Active Users
- Weekly Active Users
- Session Frequency
- Session Completion Rate

Learning

- Skill Nodes Completed
- Projects Completed
- Learning Consistency
- Roadmap Progress

Recommendation Quality

- Recommendation Acceptance Rate
- Completion Rate
- Save Rate
- Skip Rate
- User Satisfaction

Business

- Free to Pro Conversion
- Monthly Recurring Revenue
- User Retention
- Customer Lifetime Value

14. MVP Scope

Version 1 focuses on validating the core hypothesis.

Included:

- AI onboarding
- Learning Intent Profile
- Career-specific learning feed
- Personalized roadmap
- YouTube integration
- Basic Guard Mode
- Progress tracking

Excluded:

- Multi-platform integration
- Enterprise dashboard
- API platform

- Creator marketplace
 - Community features
-

15. Future Releases

Version 2

- GitHub integration
 - Documentation integration
 - Improved recommendation engine
 - Creator intelligence
 - Project recommendations
-

Version 3

- Multi-platform learning
 - AI learning coach
 - Knowledge revision engine
 - Adaptive assessments
 - Mobile application
-

Version 4

- Team learning
 - University dashboard
 - Enterprise licensing
 - Learning Intelligence API
-

16. Product Principles

Every feature added to Bloom should satisfy these principles.

1. Help learners achieve career goals.
2. Reduce cognitive overload.
3. Improve learning quality.
4. Encourage active learning over passive consumption.

5. Leverage existing educational resources.
 6. Personalize every learning experience.
 7. Respect learner autonomy and privacy.
-

17. Out of Scope

Bloom is not intended to:

- create educational videos
- replace YouTube
- replace online course providers
- become a social media platform
- function as a traditional Learning Management System

Its purpose is to intelligently connect learners with the best existing educational resources.

Product Summary

Bloom is an AI-powered learning intelligence platform that helps learners discover the right educational resources, follow structured learning journeys, minimize distractions, and continuously adapt their learning environment to achieve long-term career goals.
