

Bloom

SUMMARY

Bloom's interface is designed to reduce cognitive load and keep learners focused on meaningful progress. Every interaction should support a clear learning objective, while AI explanations, structured navigation, and consistent design patterns build trust and confidence.

PROJECTS

Bloom | User Interface & User Experience Design Specification

- Version: 1.0
- Status: Product Design Document
- Design philosophy: Learning should feel guided, not overwhelming.
- Objective: create a product that helps learners stay focused, reduces cognitive overload, and makes learning feel structured and enjoyable.

PURPOSE

This document defines the design philosophy, user experience principles, information architecture, navigation patterns, design system, accessibility standards, and screen specifications for Bloom. This document focuses on how users experience the product, not how it is implemented.

UX PRINCIPLES

Principle 1 — Simplicity: Every screen should have one primary action. Avoid unnecessary choices. Principle 2 — Focus: Remove distractions during learning. The interface should encourage deep work. Principle 3 — Explainability: Whenever AI makes a recommendation, explain why this, why now, and what will I learn. Principle 4 — Progress: Users should always know where they are, what they've completed, and what comes next. Principle 5 — Consistency: Navigation, layouts, buttons, colors, and interactions should remain consistent throughout the application.

TARGET USERS

College students; Self-learners; Career switchers; Software engineers; Data professionals; Lifelong learners. The interface should accommodate both beginners and experienced users.

INFORMATION ARCHITECTURE

Landing: Login, Sign Up, Learn More. Dashboard: Today's Learning, Continue Learning, Recommendations, Roadmap, Progress, Search, Notifications, Profile. Profile: Goals, Preferences, Settings, Privacy.

NAVIGATION STRUCTURE

Primary navigation: Dashboard, Learn, Roadmap, Search, Progress, Profile. Secondary navigation: Notifications, Settings, Help, Feedback. The navigation hierarchy should remain shallow to minimize cognitive load.

USER JOURNEY

Landing → Sign Up → AI Onboarding → Dashboard → Learning Session → Progress → Recommendations → Career Growth. The experience should feel continuous rather than fragmented.

SCREEN SPECIFICATIONS

Landing Page: Hero section, Product overview, Features, Testimonials (future), Call to Action. Primary action: Get Started. Authentication: Login, Registration, Password Recovery. Design goals: Fast, Minimal, Secure. AI Onboarding: Career Goal, Experience Level, Known Skills, Learning Style, Daily Study Time, Preferred Language. Progress indicator should always be visible. Dashboard: Today's Goal, Continue Learning, Recommended Resources, Progress Overview, Learning Streak, Upcoming Revision, Career Readiness. Learning Session: Learning objective, Recommended resource, Notes, Timer (optional), Completion button, Reflection prompt. Roadmap: Career → Skills → Current Position → Next Skills → Career Ready. Progress: Completed Skills, Learning Time, Learning Streak, Mastery Levels, Projects Completed, Career Progress. Search: Skills, Technologies, Careers, Creators, Resources. Filters: Difficulty, Platform, Duration, Format. Profile: Personal information, Goals, Preferences, Connected accounts, Privacy settings.

COMPONENT LIBRARY

Buttons; Cards; Navigation Bar; Sidebar; Progress Bar; Skill Card; Recommendation Card; Search Bar; Tag; Modal; Toast Notification; Dialog; Loading Indicator; Empty State; Error State.

DESIGN SYSTEM AND VISUAL GUIDELINES

Card Design: Recommendation cards should display Resource title, Platform, Estimated duration, Difficulty, Skills covered, AI explanation, Save action, Start learning action. Visual Hierarchy: Typography, Spacing, Contrast, Size, Grouping. Color System: Primary, Secondary, Success, Warning, Error, Neutral. Typography hierarchy: Display, Heading 1, Heading 2, Heading 3, Body, Caption. Iconography: simple, recognizable, support labels, never replace important text. Spacing & Layout: White space, Readability, Visual grouping, Predictable alignment. Responsive Design: Desktop, Tablet, Mobile, Browser Extension.

ACCESSIBILITY

Requirements include Keyboard navigation, Screen reader compatibility, Sufficient color contrast, Scalable text, Visible focus indicators, Descriptive labels, Accessible forms. Accessibility is considered a core requirement rather than an enhancement.

FEEDBACK, EMPTY STATES, AND ERROR STATES

Feedback & Microinteractions: Loading indicators, Success messages, Progress animations, Form validation, Button states, Completion confirmations. Empty States examples: No recommendations, No learning history, No notifications, No roadmap. Each should explain why empty, suggest next action, and encourage engagement. Error States should explain the problem, avoid technical jargon, suggest recovery actions, and preserve user progress whenever possible.

DESIGN TOKENS AND PRINCIPLES

Design tokens for Colors, Typography, Spacing, Border radius, Shadows, Animation durations, Component sizes. Design system principles: Modular, Reusable, Accessible, Scalable, Consistent, Platform-independent.

FUTURE DESIGN ENHANCEMENTS

Dark mode; Personalized themes; AI-generated dashboard layouts; Collaborative learning views; Interactive skill maps; Gamification (used carefully); Voice-assisted navigation.

UX SUCCESS METRICS

Onboarding completion rate; Time to first learning session; Recommendation acceptance rate; Session completion rate; User satisfaction; Task completion success; Navigation efficiency; Accessibility compliance.

GUIDING DESIGN PRINCIPLE

Design every screen to help learners spend less time navigating and more time learning.
