

Bloom

SUMMARY

This roadmap defines Bloom's long-term product evolution from an initial prototype to a global Learning Intelligence Platform. The roadmap is structured around validated learning rather than feature accumulation. Each phase should prove a core hypothesis before expanding the product.

DOCUMENT METADATA

Project: Bloom Document: Product & Engineering Roadmap Version: 1.0 Status: Strategic Development Plan

PRODUCT EVOLUTION

Idea → MVP → Learning Intelligence Platform → Multi-Platform Ecosystem → Enterprise Platform → Learning Infrastructure

GUIDING PRINCIPLES

- Improve personalization - Improve learning outcomes - Reduce learner friction - Expand knowledge sources - Increase recommendation quality - Improve scalability - Strengthen defensibility

PHASE 0 — RESEARCH & VALIDATION

Goal: Validate that the problem exists. Objectives: - Conduct learner interviews - Understand current learning behavior - Identify pain points - Validate willingness to use the product - Validate willingness to pay Deliverables: - Problem validation report - User personas - Competitor analysis - Feature prioritization - Product vision Success Criteria: - Strong evidence that learners struggle with educational discovery - Clear product positioning - Defined target audience

PHASE 1 — MVP

Goal: Build the smallest product capable of delivering value. Core Hypothesis: Personalized educational recommendations improve learning efficiency. Features: - Browser extension - AI onboarding - Learning Intent Profile - Career selection - Personalized YouTube feed - Basic recommendation engine - Basic progress tracking - Basic Guard Mode Excluded: - Enterprise features - Multi-platform support - Community - AI tutor - Mobile app Success Metrics: - Daily active users - Weekly retention - Recommendation acceptance - User satisfaction - Installation growth

PHASE 2 — LEARNING INTELLIGENCE

Goal: Transform Bloom from a recommendation tool into an intelligent learning companion. Features: - Dynamic skill graph - Adaptive learning paths - Creator intelligence - Content quality scoring - Learning analytics - Better recommendation ranking - Explainable recommendations - Personalized learning sessions Success Metrics: - Higher recommendation quality - Improved completion rates - Increased learner consistency

PHASE 3 — MULTI-PLATFORM LEARNING

Goal: Expand beyond YouTube. Supported Sources: - GitHub - Documentation - Blogs - Kaggle - Podcasts - Research papers - Interactive learning platforms Features: - Unified learning feed - Cross-platform recommendations - Resource comparison - Knowledge graph expansion Success Metrics: - Percentage of recommendations from multiple sources - Learner engagement across platforms - Improved learning completion

PHASE 4 — AI LEARNING COACH

Goal: Provide personalized mentorship. Features: - AI career coach - AI learning assistant - Concept explanations - Adaptive revision - Project recommendations - Interview preparation - Personalized assessments - Learning summaries
Success Metrics: - AI usage frequency - Improved learning retention - Higher learner confidence

PHASE 5 — COMMUNITY INTELLIGENCE

Goal: Leverage collective learning. Features: - Community-curated resources - Creator recommendations - Shared learning paths - Public learning portfolios - Peer recommendations - Resource reviews
Success Metrics: - Community participation - Resource quality improvements - Creator engagement

PHASE 6 — INSTITUTIONAL PLATFORM

Goal: Serve universities and organizations. Features: - Organization dashboard - Cohort management - Curriculum mapping - Progress analytics - Skill reports - Learning insights - Administrative controls
Target Customers: - Universities - Bootcamps - Corporate learning teams
Success Metrics: - Institutional adoption - Active organizations - Annual recurring revenue

PHASE 7 — ENTERPRISE LEARNING INTELLIGENCE

Goal: Support workforce development. Features: - Employee skill mapping - Team learning paths - Internal knowledge integration - Organization-wide analytics - Manager dashboards - Workforce capability reports
Success Metrics: - Enterprise customers - Employee engagement - Skill improvement metrics

PHASE 8 — LEARNING INTELLIGENCE API

Goal: Make Bloom infrastructure. API Capabilities: - Recommendation API - Skill graph API - Career mapping API - Creator intelligence API - Content intelligence API - Learning analytics API
Customers: - EdTech platforms - Learning Management Systems - HR platforms - Career platforms - Educational institutions
Success Metrics: - API integrations - API usage - Platform partners

PHASE 9 — BLOOM ECOSYSTEM

Goal: Create a connected learning ecosystem. Vision: Bloom becomes the central intelligence layer connecting learners, creators, universities, companies, educational platforms, and open knowledge sources. The ecosystem continuously improves through shared learning intelligence.

TECHNICAL ROADMAP

Foundation: - User management - Recommendation engine - Analytics pipeline - Learning profile Intelligence: - Skill graph - Creator graph - Content graph - Learner graph
Scale: - Distributed recommendation services - High-performance search - Graph optimization - AI orchestration
Platform: - APIs - SDKs - Third-party integrations - Enterprise services

AI ROADMAP

Stage 1: AI onboarding Stage 2: Recommendation engine Stage 3: Skill gap analysis Stage 4: Learning orchestration
Stage 5: Career intelligence Stage 6: Predictive learning Stage 7: Autonomous learning assistant

BUSINESS ROADMAP

Consumer: - Freemium - Premium subscriptions Education: - University partnerships - Bootcamp licensing Enterprise: - Workforce learning Platform: - Learning Intelligence APIs

RESEARCH ROADMAP

Continuous research areas include: - Recommendation systems - Knowledge graphs - Educational psychology - Learning analytics - Human-AI collaboration - Explainable AI - Skill modeling - Creator evaluation - Learning effectiveness Research findings should directly inform future product improvements.

SUCCESS MILESTONES

- MVP Launch: Validate core recommendation experience - 1,000 Active Users: Initial product-market validation - 10,000 Active Users: Recommendation engine maturity - Multi-Platform Support: Expansion beyond YouTube - First Institutional Customer: B2B validation - Enterprise Launch: Workforce learning platform - Public API Release: Platform ecosystem begins - Learning Intelligence Platform: Bloom becomes infrastructure

LONG-TERM VISION

Bloom evolves through four strategic transformations: Recommendation Tool → Learning Companion → Learning Intelligence Platform → Global Learning Infrastructure Mission: Help every learner discover the right knowledge, at the right time, in the right sequence, to achieve their career goals.

ROADMAP SUMMARY

Bloom's roadmap is intentionally incremental. Rather than attempting to build a comprehensive platform immediately, each phase validates a critical assumption, strengthens the core learning intelligence, expands the ecosystem, and compounds Bloom's unique assets: its understanding of learners, skills, creators, content, and learning progression. The destination is not simply another educational application—it is a foundational intelligence layer for lifelong learning across the open internet.
